

**AMENDMENT TO THE SPECIFICATION**

Place replace the previously amended paragraph [0054] with the following paragraph.

Applicants are returning paragraph [0054] to its original form.

[0054] As well as streaming (~~i.e., intelligent, real-time, transmitting of streaming content~~) and proxy functionality, the proxy servers 120-320 also possesses the ability to cache streaming content (~~i.e., dynamically store streaming content~~). This allows this content to migrate onto the edge of the network, where the content will remain for more than one use. Caching allows bandwidth consumption to be minimized across expensive wide area network links, or on more saturated internal backbones. This translates to a significant cost advantage over conventional delivery systems across a network infrastructure..
